

shares of their inputs to the servers,

and prove of validity to the bulletin

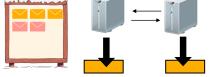

Working Servers

Bulletin Board

board.

Once the corrupt clients have been excluded, the servers generate verifiable DP histograms. They each, output a transcript to the Bulletin Board, with which

anyone can verify if the protocol was

executed faithfully.

play the role of the auditor to verify if the client inputs were legal. Accordingly, input from corrupt clients are excluded from the protocol. The servers only use input from honest clients for MPC.
